DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, drawn to a system for detecting electrical arcs, classified in class 324, subclass 536.
- II. Claims 7-10, drawn to a method for detecting electrical arcs by detecting past present and future cycles of power, classified in class 361, subclass 42.
- III. Claims 11-16, drawn to a system for detecting electrical arcs including causal/non-causal logic, classified in class 702, subclass 58.

The inventions are distinct, each from the other because:

Inventions II and I are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as detecting past present and future cycles of power which can be used for forecasting power cycle values. See MPEP § 806.05(d).

Inventions III and I are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as causal/non-causal logic which can be used for a logic based forecasting of power cycle values over a time history. See MPEP § 806.05(d).

A telephone call was made to Jaye Habyl on 11/17/2005 to request an oral election to the above restriction requirement, but did not result in an election being made.
